

ABOUT AMROCK ENTERPRISE PVT. LTD.

AMROCK ENTERPRISE PRIVATE LIMITED is an ISO 9001:2005 certified company established with a vision to supply superior quality products at an economical price. It is currently based in Rajkot, Gujarat. AMROCK has rapidly become a prominent supplier of construction tools, machinery, and PVC roundels to projects spanning PAN India. Expanding our footprint within the broader spectrum of infrastructure and construction, we are proud to introduce a cutting-edge non-woven geotextile membrane crafted from polypropylene and polyester.

Our primary goal is to provide unparalleled geosynthetic solutions and a diverse range of services. By doing so, we aim to empower owners and contractors with reliable and cost-effective options to address a myriad of geotechnical, transportation, hydraulic, and environmental challenges.

At AMROCK, we are unwaveringly committed to upholding the highest standards in all our commercial relationships with customers. Our dedication extends beyond transactions, emphasizing the cultivation of enduring, long-term partnerships. This commitment ensures that our clients not only receive superior products and services but also benefit from a sustained and mutually beneficial collaboration.

As we continue to evolve and innovate, AMROCK ENTERPRISE PRIVATE LIMITED remains steadfast in its mission to deliver excellence, foster innovation, and build lasting connections within the dynamic landscape of the construction and infrastructure industry.

AMROCK PVC Water Stoppers

AMROCK PVC water stoppers are indispensable elements in the domain of concrete masonry construction, particularly in the intricate framework of hydraulic structures where the battle against hydrostatic pressure and water seepage rages on. Crafted with precision from a specially formulated plasticized PVC composition, these profiles emerge as stalwart defenders, equipped to confront the relentless forces that threaten the integrity of such constructions.

AMROCK PVC water stoppers fulfill a multifaceted role at their core, serving as both guardians and facilitators within poured concrete structures. Their primary function revolves around creating impregnable barriers against the formidable might of hydrostatic pressure, effectively shielding the concrete matrix from the potentially devastating effects of water infiltration. By forming tight seals within the concrete joints, these stoppers effectively impede the ingress of water, thereby preserving the structural integrity and longevity of the construction.
